

The most beautiful fabric between
heaven and earth.

markilux awning fabric collection – Made in Germany

markilux

safe timeless beautiful

The most beautiful fabric between heaven and earth.

Unique materials create a special ambience It is the colour and quality of the awning fabric that make the ambience in your conservatory and on your patio special. Colour nuances, patterns and textures create that uniquely special effect, depending on their brightness and hue. As a leading manufacturer of high-grade awning fabrics with almost 100 years of experience in the manufacture of textiles, markilux offers unparalleled variety. The markilux textile design team is constantly developing new patterns in line with the latest trends which are nevertheless characterised by their timeless nature.

Among the more than 250 patterns in thematically coordinated colour families, you are certain to find your very own and most exquisite fabric between heaven and earth. Let your markilux specialist dealer inspire you, delight you and provide you with advice when it comes to selecting a material for your solar shading solution.

Printed is not woven! To guard against disappointment, kindly compare the images in this fabric brochure with the original samples that can be found in one of our showrooms or in the fabric collection of one of our specialist dealers.

markilux

Functionality can be so beautiful.

Awning covers “Made in Germany” We manufacture awning covers that maintain their shape and colour for years, and offer your home that special something. These high-tech awning fabrics are manufactured at the markilux production facility in Emsdetten, Germany in accordance with strict quality standards. The yarns are dyed using a process we ourselves developed and show their effect in up to 16 million distinctive colours with outstanding luminosity and colour intensity. This has resulted in functional textiles, which have set exceptionally high standards in terms of quality, UV protection, ease of care and appearance. markilux awning covers are available in the qualities “sunsilk” or “sunvas” or as fabrics in our markilux specials collection serving specific requirements.

sunsilk Brilliant luminosity. Silky smooth surface. sunsilk awning covers impress with their unique luminosity.

sunvas Soft glow. Textile-like to the touch. sunvas awning covers score with their textile character and natural appearance.

visutex

markilux visutex Collection 50/4/me Inspiration from the areas of fashion, architecture, colour and natural effects. 50 innovative fabrics conjure up your very own awning sky in the proven qualities of sunsilk and sunvas – exclusively from markilux.

from page 6

SUNDAY

markilux sunday collection Makes every day a Sunday. Choose your personal favourite pattern from seven different colour families – in the proven qualities sunsilk and sunvas.

specials

Textiles for special requirements Semi-transparent, heat-reflecting, permeable, highly water resistant and flame-retardant materials for blinds and awnings extend the range of the overall markilux collection.

from page 68

markilux awning covers During the production of our awning fabrics we leave nothing to chance. We produce our fabrics sunsilk and sunvas exclusively in Germany using the most modern weaving technology. We add a final finishing flourish to the fabric using our snc coating, a special formula developed in house that creates a self-cleaning effect. This finish gives our awning covers incredible longevity and resistance against rain, light and fluctuations in temperature. This is certified according to Oeko-Tex standard 100, which also guarantees they are free from harmful dyes or chemicals.

He who seeks shall find The most beautiful fabric for your designer awning can be found amongst the 250+ cover patterns at the showroom of your markilux specialist dealer or at markilux.com

With an Ultraviolet Protection Factor (UPF) of 50+, all markilux awning covers made from sunsilk or sunvas offer the highest possible degree of UV protection. This allows you to enjoy sunny days for longer, without risk.*

Self-cleaning snc effect Water droplets pick up dirt particles and run off the awning cover (the awning must be set at a pitch of at least 14 degrees). This gives you the peace of mind that your fabric will retain its colour and vibrancy for years without you having to lift a finger.

Bonded awning covers Panel joints bonded together ultrasonically ensure a consistent, unobtrusive appearance. Its excellent resistance to water, light and fluctuations in temperature ensures that the life expectancy of the cover is extended substantially.

Light, weather and colour resistance High-tech yarns dyed right to the core and the high-grade snc finish developed in house guarantee the most stunning shade in which to relax and unwind for many years to come.

* Protect your skin with care! Do not spend longer periods outside without applying sun cream. The UPF afforded by the awning applies only to direct sunlight. It offers no protection against reflected sunlight (e.g. from water).

visutex

50 / 4 / *me*

markilux

“To be fully involved, to be open to new ideas, to think laterally, make technological advances, have material awareness, utilise shapes and colours fully. To tread new ground, create a vision, make a statement: These are our goals. That is what motivates us.”

Annette Busch | Head of markilux Textile Design

exclusive

visutex | vision - innovation - inspiration

**“Architecture is the continuation of Nature’s
constructional ambitions.”** *Karl Friedrich Schinkel*

The wider field of architecture served as a source of inspiration for the development of our new visutex collection. Its shapes, textures, colours and basic principles of good design are reflected in our **exclusive** fabric patterns.

“Style is the mistress of art.” *Coco Chanel*

For the second theme in our visutex collection, we allowed ourselves to be inspired by the classics in fashion. At the same time we were constantly aware, that tastes in fashion can change very quickly. But we know, too, that Coco Chanel also said: “Fashion goes out of date, **good style never does.**”

“Colours are the smiles of Nature ...” *James Henry Leigh Hunt*

Colour is life. Colour is lifestyle. It is for this reason that we have set aside an inordinate amount of room for the theme of colour in our collection. Our competence in this field even enables you to choose precisely the colour that makes you feel good from an extremely broad palette and to fulfil the realisation of your own personal awning cover. **colour on demand.** My colour. My style.

“The freedom of imagination is not an escape into fantasy, it is boldness and creativeness at the same time.” *Eugène Ionesco*

As a pioneer in Innovative Awning Fabric Design, we have dedicated the fourth theme in our collection to “Special Effects”. Extraordinary “glowing” visual effects come into being as a result of the use of exceptional colours. This is **truly unique.**

Solar protection with a view The sunvas fabric with special perforating technique stands for agreeable transparency and good light and air permeability.

We recommend transolair be used for drop valances as well as for vertical blinds, marquisolettes, drop-arm and conservatory awnings.

This perforated fabric maintains visual contact with the outdoors and shields against prying eyes at the same time. It ensures good air circulation, which effectively reduces the build-up of a hot air cushion between cover and window.

Example of the underside of fabric 332 17

Ideal for conservatories Gaps in the warp yarns make this sunsilk fabric permeable to both air and water. The risk of the formation of water troughs in rain showers and the build-up of excessive heat between cover and glass is reduced. The aluminium encapsulated in the coating* of series 332xx reduces solar gain as well. The weatherfast finish also inhibits the accumulation of dirt and offers excellent water repellency.

* The top side of the material is impregnated with a higher percentage of aluminium and should face outwards to maximise solar reflection. The aluminium in the coating is visible, especially in the case of light cover patterns and under backlit conditions.

A valance is a small decorative piece of fabric suspended from the underside of the front profile. markilux has chosen a standard braid that matches every fabric pattern. Should you, however, wish to have an alternative braid colour, please choose one from the colour options shown.

Valance shapes

292 47

292 33

292 65

292 49

Valance shape 1

Valance shape 3

Valance shape 2

Valance shape 6

When ordered with an awning, the valance will always match the cover as it is cut from the same piece of material. It also runs out symmetrically on both sides.

In the case of striped fabrics, the valance shape is matched to the pattern repeat.

We regret that we cannot guarantee that the pattern repeat of a valance supplied at a later date will match that of the original cover.

Product characteristics and care

Awning covers are industrially manufactured textile products which serve both a functional and a decorative role. They are high-performance products that meet strict technical requirements and undergo extensive laboratory testing during every phase of production.

Criteria such as water impermeability, stiffness, dirt and water-repellent properties, resistance to tearing and tear propagation, colour fastness and numerous other characteristics are defined, assessed and guaranteed for each fabric type by the manufacturer.

Although only first-class, quality controlled fabric is used in production, there are limits to the degree of perfection that can be achieved. Small irregularities such as knots, thicker and thinner sections of yarn, isolated yarn breakages as well as certain idiosyncracies of awning covers are occasionally phenomena that awning owners complain about, but such characteristics cannot be completely eradicated even with today's technology.

Creases

Creases can appear during the cover making process and when the fabric is folded. A dark line may become visible at the crease when viewed against the light, especially in the case of light colours. This is because the fibres have become kinked when the fabric has been folded (altered light refraction).

Puckering of the fabric

Puckering can appear along the side hems, around the seams and in the centre of the panel. There is a double layer of fabric at the seams, which are sewn or bonded when flat. As the cover is wound onto the roller the two layers of fabric are forced to assume different diameters thus creating tension within the fabric.

The tension of the folding arms and the weight of the roller and/or front profile can contribute to this effect. Puckering can also develop if a water trough forms during heavy rainfall.

Water impermeability and resistance to rain

Solar protection fabrics are impregnated with a water-repellent finish and, if properly cared for and used at a pitch of at least 14°, remain impervious to water during short, light rainfall.

During prolonged and/or heavy rainfall the awning must not be extended or should be retracted to prevent any damage.

If the cover gets wet, the awning must be extended again at the earliest opportunity to allow the fabric to dry and prevent the build-up of mildew, i.e. marking of the fabric.

Tension-induced stretching of the side hems

In most cases an active tensioning system keeps the cover taut almost permanently. Although seams and hems provide reinforcement, they also have to withstand the most strain. When the cover is rolled up the seams and hems roll up on themselves, which increases the pressure and tension even more. They are therefore exposed to considerable tension and this can cause them to stretch slightly. As a consequence the side hems may sag slightly when the awning is extended.

Taking proper care of your blind or awning cover

Dust and dirt can best be removed when dry by means of a soft brush. Remove leaves, twigs and similar debris immediately. Small marks or stains should be removed using lukewarm water and a commercially accepted, preferably liquid detergent suitable for delicate fabrics (5% soap solution, water temperature max. 30°C). Rinse thoroughly with water and treat the spot with a commercial tent impregnation spray. Please be aware that this measure will not restore the cover to its original state.

Detailed instructions for the awning buyer with all important information regarding operation, care and maintenance are included with every awning delivery.
